

Review MENTOR 6 Light in "THERMIK" magazine

The latest issue of THERMIK magazine was published yesterday, but only online due to the coronavirus pandemic. Nice for the community - it can be downloaded for free at www.thermik.at/wp-content/.../THERMIK_5_2020_Sonderausgabe.pdf. Thanks very much to the publishers!

From page 45 onwards you can read a detailed test report of the MENTOR 6 light (EN B). Their conclusions:

"The Mentor 6 Light is the perfect vol-biv and adventure wing. The concept of robustness, low weight and simple flight behaviour makes this lightweight wing from Nova the ideal and reliable companion for travelling with a paraglider, cross-country as well as hike & XC adventures. At take-off, the wing fully meets the requirements of this target group.

The launch preparations can be carried out with ease even on steep launch sites. In addition, the glider is easy to handle even in challenging wind conditions and can be quickly brought back under control if the inflation goes off course.

The flight behaviour offers safety and stability, full performance in climb and on glide, a manageable extreme flight behaviour as well as simplicity in fast descents. Over all, the Nova Mentor 6 Light can be seen as a solid benchmark in the high-level range of the B-Class."

Detailed information about wing at: www.nova.eu/mentor-6-light

Latest news for lightweight pilots: the MENTOR 6 Light will soon be available in size XXXS with a weight range from 55 to 70 kg. The certification itself is completed and we are only waiting for the "final paperwork".
